                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 30, 1 Sequence 31, 18 Sequence 31, 18 Sequence 31, 18 Sequence 30, 18 Sequence 31, 18 Sequence 31, 18 Sequence 29, 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/08688145
Sequence 3, Application US/08688145
Patent No. 5744310
GENERAL INFORMATION:
APPLICANT: Reed, John C.
TITLE OF INVENTION: BAX Promoter Sequence and Screening
Patent No. 5744310
TITLE OF INVENTION: Expression
TITLE OF INVENTION: Expression
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores

Patent No. 5876711

GENERAL INFORMATION:

APPLICANT: Fattaey, Ali

TITLE OF INVENTION: Methods and Compositions for Determining TITLE OF INVENTION: the Tumor Suppressor Status of Cells

NUMBER OF SEQUENCES: 6

CORRESPONDENCES ADDRESS:

ADDRESSEE: Only Pharmaceuticals, Inc.

STREET: 3031 Research Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-657-828A-3/C

Patent No. 5487985
GENERAL INFORMATION:
APPLICANT: McClelland, Michael
APPLICANT: Weleh, John T.
APPLICANT: Sorge, Joseph A.
TITLE OF INVENTION: Arbitrarily Primed Polymerase Chain
TITLE OF INVENTION: Raction Method For Fingerprinting Genomes
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: 2730 Sand Hill Road
                                                                                                                                                                                                                                                                                                                                                  ö

Fatent No. 5861245
GENERAL INFORMATION
APPLICANT: McClelland, Michael
APPLICANT: Welsh, John T.
APPLICANT: Sorge, Joseph A.
ITILE OF INVENTION: REACTION METHOD FOR FINGERPRINTING GENOMES
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
GENERAL INFORMATION:

APPLICANT: MCC18-11and, Michael

APPLICANT: Welsh, John T.

APPLICANT: Sorge, Joseph A.

TITLE OF INVENTION: ARBITRARILY PRIMED POLYMERASE CHAIN

TITLE OF INVENTION: REACTION METHOD FOR FINGERPRINTING GENOMES

NUMBER OF SEQUENCES: 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1, Application US/09347343A

Sequence 1, Application US/09347343A

Patent No. 651494B

GENERAL INPORMATION:
APPLICANT: RAZ, Eyal R.
APPLICANT: KOBAYAHL, Hiroko
TITLE OF INVENTION: METHOD FOR ENHANCING AN IMMUNE RESPONSE
FILE REFERENCE: 30448.641501

CURRENT APPLICATION NUMBER: US/09/347,343A

CURRENT FILING DATE: 1999-07-02

NUMBER OF SEQ ID NOS: 40

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 1

LENGTH: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1, Application US/09347343A

Sequence 9, Application US/08646301A
Patent No. 6194211
GENERAL INFORMATION:
APPLICANT: Richards, Cynthia Ann
APPLICANT: Richards, Cynthia Ann
APPLICANT: Huber, Brian E.
TITLE OF INVENTION: Transcriptional Regulatory Sequence of Carcinoembryonic
TITLE OF INVENTION: Antigen for Expression Targeting
FILE REFERENCE: PB1508USW
CURRENT APPLICATION NUMBER: US/08/646,301A
CURRENT FILING DATE: 1996-05-16
NUMBER OF SEQ ID NOS: 25
SOGTWARE: Patentin Ver. 2.1
SEQ ID NO 9
LENGTH: 8

Patent No. 6639065

Patent No. 6639065

Patent No. 6639065

Patent No. 6639065

TITLE OF INVENTION: A chemically synthesized artificial promoter for high level expresonment of the synthesized artificial promoter for high level expresonments of INVENTION: Lansgenes and a method for its synthesis

PILE REPERENCE: 052511

CURRENT APPLICATION NUMBER: 0590,03.05

PRIOR APPLICATION NUMBER: 3322/Del/98

PRIOR FILING DATE: 1998-11-09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Patent No. 6514948
GENERAL INFORMATION:
APPLICANT: RAZ, Eyal R.
APPLICANT: RAZ, Eyal R.
APPLICANT: KOBAYASHI, Hiroko
TITLE OF INVENTION: METHOD FOR ENHANCING AN IMMUNE RESPONSE
FILE REFERENCE: 30449.64950.
CURRENT APPLICATION NUMBER: US/09/347,343A
CURRENT FILING DATE: 1999-07-02
TITLE OF INVENTION: Methods of Treating Hypertension FILE REPERBING: 21508-064
CURRENT PEPLICATION NUMBER: US/09/305,839
CURRENT PELLON DATE: 1999-05-05
FRIOR APPLICATION NUMBER: 08/818,655
FRIOR PILING DATE: 1997-03-14
NUMBER OF SEQ ID NOS: 46
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 41

Sequence 7, Application US/09263692A

Patent No. 6639065

GENERAL INFORMATION:

APPLICANT: Council of Scientific and Industrial Research

TITLE OF INVENTION: A chemically synthesized artificial promoter for high level expre

TITLE OF INVENTION: Lransgenes and a method for its synthesis

CURRENT APPLICATION NUMBER: US/09/263,692A

CURRENT FILING DATE: 1999-03-05

PRIOR APPLICATION NUMBER: 3122/Del/98

PRIOR APPLICATION NUMBER: 3322/Del/98

PRIOR FILING DATE: 1998-11-09

NUMBER OF SEQ ID NOS: 20

SOFTWARE: PatentIn version 3.0
